Insecticide for effective termite management

Active Ingredient:

Imidacloprid 30.5% SC

Recommendations for use:

Premise is used for the control of termites in pre-construction as well as in post-construction Anti-Termite treatment.

Key Features and Benefits:

Non-repellent insecticide forbidding the termites to detect the gaps in the barrier formed during application

Exposed termites on their return to nest, transfer toxicant to other mates thereby causing indirect mortality

Evaluated by CBRI

It enables more termites to get exposed to the treated soil as it doesn't kill them on contact, giving a better control - Domino effect

Recommended in IS 6313 specification for Anti-Termite treatment

Certified with BIS ISI Mark, GreenPro certified by - IGBC, CII

Mode of Action:

Imidacloprid is an antagonist to the nicotinic acetyl choline receptor in the central nervous system. It disturbs the signal transmission system leading to excitation of nerve cell. Consequently a disorder of the nervous system occurs leading finally to the death of the treated insect.

Dosage:

Dilute 2.1 ml of Premise in 1 litre of water for the control of termites in buildings during pre and post-construction anti termite treatment.

(Note: Treatment has to be carried out as per current IS 6313 specification)

Packs:

250 ml, 1 litre and 5 litres
